Duhan Onat Karadayı

Technical Solutions Lead · Statistician · AI & Agentic Engineering

Prague, Czech Republic · +420 722 594 034 · duhanonat@gmail.com · linkedin.com/in/iamonat · du0ks.github.io

PROFILE

Statistician who ships production systems. METU Statistics graduate and Technical Solutions Lead at İnovakademi, owning web, server, data and AI projects end-to-end. Two years of daily work with AI coding agents (Claude Code, Codex), MCP, n8n, Microsoft Copilot Studio and LLM APIs (Anthropic, OpenRouter), including a self-hosted Claude-powered assistant chosen by my own evaluation set. MSc Innovation Project Management student at ČVUT Prague; available for full-time, part-time and internship roles in Czechia.

SKILLS

AI & agentic engineering: Claude Code, Anthropic API (Claude), OpenAI Codex, OpenRouter, MCP (Model Context Protocol), n8n, Microsoft Copilot Studio, ChatGPT, Google AI Studio, HeyGen; agentic development, workflow automation, LLM API integration, structured outputs, LLM evaluation, prompt design, model selection

Programming: Python and R (advanced, used extensively throughout the statistics degree), SQL, Bash, PHP, JavaScript/TypeScript, Java; algorithms and data structures

Statistics & ML: Regression, classification, clustering, PCA, time series, hypothesis testing, ANOVA/MANOVA, design of experiments, Random Forest, XGBoost, ranking/scoring models, survival analysis

Data tools: pandas/NumPy, tidyverse, scikit-learn, Excel (advanced), Minitab, dashboards and data pipelines

Linux & cloud: Linux (advanced, daily driver for 15 years), Ubuntu server administration, Azure VM, Nginx, Caddy, PHP-FPM, SSH, Docker, Git/GitHub, deployment and production troubleshooting

Web & platforms: WordPress, TutorLMS, React, Node.js, Vite, Firebase, REST APIs, CalDAV, Google Workspace administration, DNS/email/domains

Business: Requirements analysis, technical project management, market research, UR-GE studies, ministry-facing reporting, training design, presentations, client communication

PROFESSIONAL EXPERIENCE

Technical Solutions Lead — **May 2026 – Present**

İnovakademi (foreign-trade training and consultancy) — *Remote · Prague*

- Own the company's technical projects end-to-end: requirements, solution design, implementation, deployment and production support.
- Designed, built and launched the SATSO learning-management platform (WordPress, TutorLMS) end-to-end as sole developer: Ubuntu, Nginx, PHP-FPM, security review, SSH, deployment automation and production support.
- Project manager for the AI module of Cordelia, a clinic patient-data platform: scoped requirements with the founders and advocated an API-based LLM architecture over training a proprietary model.
- Produced AI-avatar video courses (HeyGen) and bilingual study materials for corporate education programmes for client companies.
- Designing "Applied AI Solutions for SMEs", an online training for client companies' staff.
- Executed the company's Yandex 360 to Google Workspace migration and administer Workspace, DNS, email and hosting.
- Work daily with AI coding agents (Claude Code, OpenAI Codex), connected to tools and data through MCP servers, as the core engineering workflow for implementation, testing, automation and infrastructure.
- Prepare market and commercial analyses, UR-GE export-cluster studies and Ministry of Trade-facing reports and presentations for client companies.
- Technical point of contact for clients: translate business requirements into working solutions across web, hosting, email and data.

Full-Stack Developer & Data Scientist — **May 2025 – Apr 2026**

The Globby (İnovakademi subsidiary) — *Remote*

- Developed an algorithm that identifies country-level trading opportunities for each product from UN Comtrade-type trade data, using ranking and scoring approaches in Python and R.
- Applied regression, classification, PCA, Random Forest, gradient boosting (XGBoost-type) and time-series methods to trade and economic data for market and opportunity analysis.
- Built data pipelines and analytics dashboards; integrated models into backend services on Linux servers with SQL and Python.
- Automated recurring data collection, processing and reporting workflows with Python and SQL.
- Full-stack development of application features (JavaScript front end, Python/SQL back end) for a mobile application serving international trade.
- Produced market and opportunity analyses on trade and economic data to support product and business decisions.

Data Science Intern **Oct 2024 – Jan 2025**
Human Resources Office, Presidency of the Republic of Türkiye *Ankara*

- Analysed multiple HR datasets with regression, MANOVA and clustering; delivered models, visualisations and written interpretation in R, Python, SQL and Excel.
- Worked with Microsoft Copilot Studio on AI assistant use cases within the office's Microsoft environment.
- Wrote reusable Excel and R scripts that were adopted by other departments for routine analyses.
- Used SQL and Excel for data extraction and manipulation.

Strategic Planning and Management Intern **Jun 2023**
TÜBİTAK (Scientific and Technological Research Council of Türkiye) *Ankara*

- Performed statistical analyses of TÜBİTAK project data using regression and non-parametric tests.
- Designed and developed a work-planning application in Java using object-oriented programming.

PROJECTS

brian — AI planning assistant (live, self-hosted) — Mobile and web app that turns free-form notes into structured tasks, events and reminders via the Anthropic API (Claude). Built with Claude Code; runs on an Azure Ubuntu VM (Caddy/HTTPS, passkeys, CalDAV sync). Model chosen with an evaluation set of hand-labelled real notes comparing Claude Haiku and Sonnet.

maverick — Local speech-to-text tool built on OpenAI Whisper, running fully on-device.

Leo Notes (leo-notes.web.app) — Note-taking web app built with Vite and Firebase.

Financial Planner (du0ks.github.io/financial_planner) — Financial-planning web app built with Vite and Firebase.

Telco Customer Churn Analysis — Statistical and ML churn analysis with classification models in Python/R.

Housing Price Drivers (sahibinden.com) — Scraped real-estate listings and modelled price drivers with regression.

EDUCATION

MSc Innovation Project Management **2026 – 2028 (expected)**
Czech Technical University in Prague (ČVUT), MIAS *Prague*

- Coursework: project management, innovation management, financial and strategic management, process and project standards, Six Sigma, sustainability, statistical analysis.

BSc Statistics **Graduated Jul 2026**
Middle East Technical University (METU) *Ankara*

- Teaching Assistant, Data Analysis for Archaeometry (graduate course): taught R programming and statistical techniques.
- Founding and board member, METU AI Community; board member, METU Lodos Community.
- Coursework: regression, logistic regression, multivariate statistics, PCA, clustering, time series, sampling, survival analysis, computational statistics, design of experiments (Minitab).
